SAP® Analytics Cloud

The **VUCA environment**, in which organisations are moving today, is characterised by volatility, uncertainty, complexity, and ambiguity. In this scenario, companies are forced **to adapt** to the **continuing changes** that attack their strategic programming and professional routines.

Thus, companies in a VUCA environment are affected by two main variables: How much do we know about a particular situation, and to what extent can we anticipate the outcome of our actions?

In summary, to deal with these two main premises, it is essential to focus the business strategy on **knowledge** and **predictability** and to have the tools to help analyse our business in **real-time** for agile decision-making.

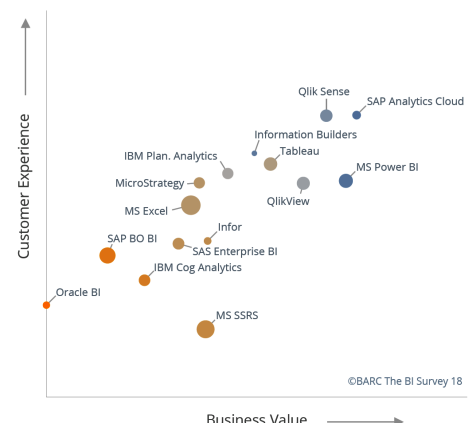

SAP ANALYTICS CLOUD

A tool that provides all of the advanced data visualisation and analytic functions for your enterprise, in a single, scalable product, allowing users **to discover, visualise, plan,** and **predict,** from anywhere.

MANNER OF DEPLOYMENT

SAP Cloud Analytics is a next-generation SAP **SaaS** (Software as a Service) platform that can **be integrated with data sources in the cloud or on-site** using Live or Import connections

Business Value

REPORTING

- Preparation of interactive reports and operating statements
- Geolocalisation
- Drill down functions
- Configuration using Drag and Drop
- Smart Insights & Smart Discovery

PLANNING

- Importation of planning data from various SAP or non-SAP sources
- Management of public and private versions
- Planning functions such as assigning specific values to cells, distribution at a lower level, inserting comments, etc.
- Collaborative environment, either online or through the creation of tasks

PREDICTION

- Predictive forecast
  - Automatic
  - Triple exponential algorithm
- Generation of forecast and rolling forecasts
- Analysis of what-if scenarios

MAIN FEATURES

CLOUD	INTUITIVE	ANALYSIS	REAL-TIME
SIMPLE	SAFE	MULTI-DEVICE	PAY PER USE

SAP Cloud Analytics is the most advanced solution to discover, visualize, and predict your data from a single environment. Furthermore, you don't have to wait to migrate to S/4 HANA or require SAP BW to get started.
