# MIGRATION OF SAP PLATFORM TO AZURE

Businesses have already seen the value of the cloud. The average cloud budget has been reduced by almost 36% since 2016, with 73% of organisations that have at least one new cloud application and companies that already run portions of SAP in the cloud.

The flexibility, scalability, and productivity offered by the cloud, combined with the need to reduce operating costs, increase cash flow, and be able to react quickly to new opportunities means that many of our customers are looking for ways to migrate the execution of their core processes to the cloud.

## THE REAL DRIVERS FOR MIGRATION TO THE CLOUD ARE THE RESULTING BENEFITS FOR BUSINESS

The cloud provides significant benefits, including not only **lower TCO** and faster time-to-market, but also access to **innovation**.

**The agility and flexibility** it provides are essential to **react to changes** in the environment.

In addition, there are many capabilities provided by the cloud for SAP Solutions, from faster **transactional processes** and **advanced analysis of the Internet of Things (IoT)**, **security** of the cloud and **infrastructure**, sophisticated **identity management capabilities**, and **industry-specific solutions** that can help businesses not only to operate but also to remain **competitive** in the digital age.

All these capabilities determine that, when different customers are considering whether to migrate their platform to a private or public cloud, it is increasingly clear that **the public** cloud delivers **the greatest benefits** for their business.

**Microsoft Azure is the preferred choice  
for most customers**

## BENEFITS OF SAP MIGRATION TO AZURE

SAP has selected Microsoft **Azure** as **its priority partner** for migrations to the cloud so that **the SAP-Azure combination reduces the complexity** and minimises **the cost** of migrating an on-site system to the cloud.

**Flexible** and **integrated** platform  
for increased productivity

It covers all the **security** and **regulatory**  
needs of your business

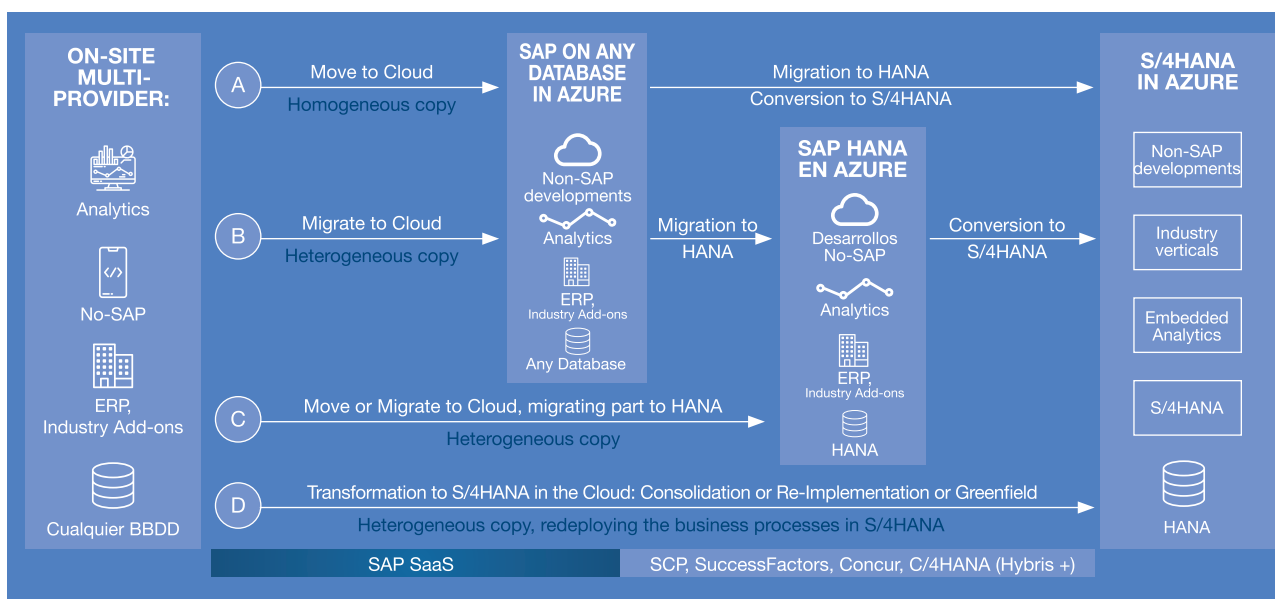

**Scalability** to support both SAP  
and non-SAP volume growth

**Accelerates innovation** by providing new  
technologies such as IA, IoT, ...

## WHAT IS THE BEST STRATEGY FOR YOUR INFRASTRUCTURE?

Those organisations that are considering migrating from their SAP platform to Azure should evaluate **their position in their current SAP lifecycle** and where their platform will go.

**It is, therefore, critical to assess the current environment** and **to create** the best medium- and long-term strategy.

At Experis Solutions, we help our customers to **define the strategy and roadmap of the SAP platform**, both **in their migration to Azure** and in the evolution of the different products.
